GLUECoS-NLI-Knowledge

This is a Conversational Code-switched Natural Language Inference dataset, in English and Hindi (written in Roman script). Here, the premise is a multi-turn dialog and hypothesis is a sentence. Deviating from the traditional NLI task, the goal is to determine whether inferring the entailment label for a premise-hypothesis pair would require some sort of external knowledge or not.

E-Manual

This is a *question-answering task*. Here the dataset is a set of manuals of electronic instruments, and the goal here is to extract an answer and/or the section from the manual where an answer is present for a given question.
